

Case Study

Client – Cunard Line
Venue – QM2 and QE2
Project – Various
Architect – n/a
Consultant – n/a
Project Value – n/a

Technology systems aboard cruise ships are some of the most intensively used in the entertainment business. Often running up to 18 hours a day under challenging conditions, good system design and installation must be supported by excellent backup and servicing.

We provide ongoing repairs and maintenance to Cunard Cruise Lines, as well as refurbishment of their technical areas.
