

Case Study

Client – Princess Cruises

Venue – Various Ships

Project – Various

Architect – n/a

Consultant – n/a

Project Value – n/a

We have helped Princess Cruises with their electrical requirements for many of the company's latest production shows, most notably the Motorcity Shows that have successfully been rolled out across their fleet.

These theatre-based shows feature a number of essential scenic elements which are technically integrated with the show, as well as electrical infrastructure which helps make the show straightforward to install and stage.

Working to very tight lead times and installing equipment in foreign locations, we provide this infrastructure on time and to budget.
