

Case Study

Client – Live Nation

Venue – Playhouse Theatre, Edinburgh

Project – Switch Room and Mechanical Plant Supplies

Architect – n/a

Consultant – n/a

Project Value – n/a

The demands of modern-day cooling requirements obliged the Playhouse Theatre in Edinburgh to upgrade its mains supply to feed two enormous 270kilowatt chillers on the roof.

While carrying out that work, the Fagan Electrical team also upgraded the main switch room over one weekend, a task which involved connecting a generator to the building on the Friday evening to run essential services, and then restoring power to the new switch room and switch gear at lunchtime on the Tuesday, in time for a show arriving on Wednesday.
